## Math 226- HW 3 Due: Sep 19 by Midnight

---

1. (10 points)

a) (6 points) In  $\mathbb{F}^n$  ( Take  $\mathbb{F} = \mathbb{R}$  first if  $\mathbb{F}$  confuses you). Let  $e_j$  denote the vector whose  $j$ th coordinate is 1 and whose other coordinates are 0. Prove that  $S := \{e_1, e_2, \dots, e_n\}$  is linearly independent set and generates  $\mathbb{F}^n$ . **Remark:** The vectors  $e_i : i = 1, 2, \dots, n$  are called standard vectors. In  $\mathbb{R}^n$ , we use these frequently and call the set of standard vectors “the standard bases”.

c) (4 points) Let  $V$  be vector space over a field  $\mathbb{F}$  with characteristic not equal to two. ( This means that if  $x \neq 0$ , then  $x + x \neq 0$  for any  $x \in \mathbb{F}$ . ) Let  $u$  and  $v$  be distinct vectors in  $V$ . Prove that  $\{u, v\}$  is linearly independent if and only if  $\{u + v, u - v\}$  is linearly independent.

To see why, characteristic causes a trouble, note that you can gain zero while adding and subtracting the coefficients.

2. (22 pts) Let  $V$  be a vector space over  $\mathbb{F}$  and  $S = \{v_1, v_2, \dots, v_k\} \subseteq V$ .

(a) (6 points) For every  $x \in V$ , prove that  $x \in \text{span}(S)$  iff  $\text{span}(S) = \text{span}(S \cup \{x\})$ .

(b) (6 points) Suppose that  $w \in V$  but  $w \notin S$ . Further suppose that  $S$  is linearly independent. Prove that  $S \cup \{w\}$  is linearly independent iff  $w \notin \text{span}(S)$ .

(c) (10 points) We write  $A \subsetneq B$  to mean  $A \subseteq B$  and  $A \neq B$ . Prove that a set  $S = \{u_1, u_2, \dots, u_k\}$  is linearly independent iff

$$\{0\} \subsetneq \text{span}(\{u_1\}) \subsetneq \text{span}(\{u_1, u_2\}) \subsetneq \text{span}(\{u_1, u_2, u_3\}) \subsetneq \dots \subsetneq \text{span}(\{u_1, \dots, u_k\}).$$

**Remark:** Another insignificant looking, but fundamental result. With this problem, we say that a set is linearly independent iff the span gets bigger with addition of each vector vector.

3. (14 points) Suppose  $U$  and  $W$  are subspaces of  $V$ . Recall we define the set  $U + W = \{u + w : u \in U, w \in W\}$ . We say  $U + W$  is a direct sum if and only if  $U \cap W = \{0\}$ . In this case we represent the sum as  $U \oplus W$ . For example, if  $U = \text{Span}((1, 0))$  and  $W = \text{Span}((0, 1))$  then  $\mathbb{R}^2 = U \oplus W$  since  $\mathbb{R}^2 = U + W$  and  $U \cap W = \{(0, 0)\}$

a) (3 points) Let  $U$  be the subspace of  $\mathbb{R}^5$  defined by  $U := \{(x_1, x_2, x_3, x_4, x_5) \in \mathbb{R}^5 : x_1 = 3x_2, x_3 = 7x_4\}$ . Find a basis of  $U$ . (Recall we did a simpler version of that in the class.)

- (2 points) Extend the basis in the first part to a basis of  $\mathbb{R}^5$

- (2 points) Find a subspace  $W$  of  $\mathbb{R}^5$  such that  $\mathbb{R}^5 = U \oplus W$ . Validate your answer.

b) (3 points) Let  $U$  be the subspace of  $P_4(\mathbb{R})$  defined by  $U = \{f \in P_4(\mathbb{R}) : f'(1) = 0\}$ . Find a basis of  $U$ .

- (2 points) Extend the basis in the first part to a basis of  $P_4(\mathbb{R})$ .

- (2 points) Find a subspace  $W$  of  $P_4(\mathbb{R})$  such that  $P_4(\mathbb{R}) = U \oplus W$ . Validate your answer.

4. (7 points) We define  $M_{n \times n}(\mathbb{F})$  as the matrices defined over  $\mathbb{F}$  with size  $n \times n$ . We also define trace of  $A = [a_{ij}]_{n \times n} \in M_{n \times n}(\mathbb{F})$  as

$$\text{Tr}(A) = \sum_{i=1}^n a_{ii}$$

Find a basis for matrices in  $M_{3 \times 3}(\mathbb{R})$  with trace zero.

**Practice Problems :** Sec 1.4 : 8-16 , Sec 1.5 2-7, 9, 14, 15, 17, 18, 20
