PSETs Landing Page*

Anish Krishna Lakkapragada

This is the documentation for using my PSET PDFs responsibly. I post these LaTEX'd PSETs (1) as an education resource for friends at other universities, fellow Yalies, and all those interested and (2) for quick reference. These PSETs are not to be used irresponsibly; only look at the solution after giving each problem an honest attempt. **If YOU USE THESE PSETS TO CHEAT, YOU ARE NOT ONLY STUPID BUT YOU ARE CHEATING YOURSELF OUT OF THE ABILITY TO FALL IN LOVE WITH MATH.** Furthermore, I am not smarter than you and my solutions did not always get a perfect score.

The general format for accessing the (one-indexed) `N`th assigned PSET PDF of a Yale course with course number `CODE` is:

`https://anish.lakkapragada.com/notes/TYPE-CODE/psets/N.pdf`

where `TYPE` is `stats` or `math`. Similarily, to access my solution for this PSET you can go to:

`https://anish.lakkapragada.com/notes/TYPE-CODE/sols/N.pdf`

These PSETs and associated solution PDFs are synchronized daily at 4:20AM with my computer files through a Cronjob Shell Script. If you want to contribute any corrections, please email `anish.lakkapragada@yale.edu`.

*Note that PDF here is referring to Portable Document Format, not to be confused with the veritable Probability Density Function.

Math 226- HW 3 Due: Sep 19 by Midnight

---

1. (10 points)

   a) (6 points) In $\mathbb{F}^n$ (Take $\mathbb{F} = \mathbb{R}$ first if $\mathbb{F}$ confuses you). Let e_j denote the vector whose jth coordinate is 1 and whose other coordinates are 0. Prove that $S := \{e_1, e_2, ..., e_n\}$ is linearly independent set and generates $\mathbb{F}^n$. **Remark:** The vectors $e_i : i = 1, 2, .., n$ are called standard vectors. In $\mathbb{R}^n$, we use these frequently and call the set of standard vectors "the standard bases".

   c) (4 points) Let V be vector space over a field $\mathbb{F}$ with characteristic not equal to two. (This means that if $x \neq 0$, then $x + x \neq 0$ for any $x \in \mathbb{F}$.) Let u and v be distinct vectors in V. Prove that $\{u, v\}$ is linearly independent if and only if $\{u + v, u - v\}$ is linearly independent.

      To see why, characteristic causes a trouble, note that you can gain zero while adding and subtracting the coefficients.

2. (22 pts) Let V be a vector space over $\mathbb{F}$ and $S = \{v_1, v_2, ..., v_k\} \subseteq V$.

   (a) (6 points) For every $x \in V$, prove that $x \in \text{span}(S)$ iff $\text{span}(S) = \text{span}(S \cup \{x\})$.

   (b) (6 points) Suppose that $w \in V$ but $w \notin S$. *Further suppose that S is linearly independent.* Prove that $S \cup \{w\}$ is linearly independent iff $w \notin \text{span}(S)$.

   (c) (10 points) We write $A \subsetneq B$ to mean $A \subseteq B$ and $A \neq B$. Prove that a set $S = \{u_1, u_2, \ldots, u_k\}$ is linearly independent iff

   $$\{0\} \subsetneq \text{span}(\{u_1\}) \subsetneq \text{span}(\{u_1, u_2\}) \subsetneq \text{span}(\{u_1, u_2, u_3\}) \subsetneq \cdots \subsetneq \text{span}(\{u_1, ..., u_k\}).$$

   Remark: Another insignificant looking, but <u>fundamental</u> result. With this problem, we say that a set is linearly independent iff the span gets bigger with addition of each vector vector.

3. (14 points) Suppose U and W are subspaces of V. Recall we define the set $U + W = \{u + w : u \in U, w \in W\}$. We say $U + W$ is a direct sum if and only if $U \cap W = \{0\}$. In this case we represent the sum as $U \bigoplus W$. For example, if $U = \text{Span}((1, 0))$ and $W = \text{Span}((0, 1))$ then $\mathbb{R}^2 =$U $\bigoplus W$ since $\mathbb{R}^2 = U + W$ and $U \cap W = \{(0, 0)\}$

   a) (3 points) Let U be the subspace of $\mathbb{R}^5$ defined by $U := \{(x_1, x_2, x_3, x_4, x_5) \in \mathbb{R}^5 : x_1 = 3x_2, x_3 = 7x_4\}$. Find a basis of U. (Recall we did a simpler version of that in the class.)

   - (2 points) Extend the basis in the first part to a basis of $\mathbb{R}^5$
   - (2 points) Find a subspace W of $\mathbb{R}^5$ such that $\mathbb{R}^5 = U \bigoplus W$. Validate your answer.

   b) (3 points) Let U be the subspace of $P_4(\mathbb{R})$ defined by $U =: \{f \in P_4(\mathbb{R}) : f'(1) = 0\}$. Find a basis of U.

   - (2 points) Extend the basis in the first part to a basis of $P_4(\mathbb{R})$.
   - (2 points) Find a subspace W of $P_4(\mathbb{R})$ such that $P_4(\mathbb{R}) = U \bigoplus W$. Validate your answer.

4. (7 points) We define $M_{n\times n}(\mathbb{F})$ as the matrices defined over $\mathbb{F}$ with size $n \times n$. We also define trace of $A = [a_{ij}]_{n\times n} \in M_{n\times n}(\mathbb{F})$ as

$$Tr(A) = \sum_{i=1}^{n} a_{ii}$$

Find a basis for matrices in $M_{3\times 3}(\mathbb{R})$ with trace zero.

Practice Problems : Sec 1.4 : 8-16 , Sec 1.5 2-7, 9, 14, 15, 17, 18, 20
