# Math 244 - Problem Set 1

due Friday, January 24, 2025, at 11:59pm

## Section 1.2

- 5. Is a "cancellation" possible for the Cartesian product? That is, if  $X \times Y = X \times Z$  holds for some sets X, Y, Z, does it necessarily follow that Y = Z?
- 6. Prove that for any two sets A, B we have

USE 
$$\mathbb{R}(A \setminus B) \cup (B \setminus A) = (A \cup B) \setminus (A \cap B).$$

Note from Prof. Hall:  $A \setminus B$  is the "difference" of A and B, i.e., the set of all elements belonging to A but not to B.

# Section 1.3

- 2. The numbers  $F_0, F_1, F_2, \ldots$  are defined as follows (this is a definition by mathematical induction, by the way):  $F_0 = 0, F_1 = 1, F_{n+2} = F_{n+1} + F_n$  for  $n = 0, 1, 2, \ldots$  Prove that for any  $n \geq 0$  we have  $F_n \leq ((1 + \sqrt{5})/2)^{n-1}$  (see also Section 12.3).
- 5. (optional bonus problem) In ancient Egypt, fractions were written as sums of fractions with numerator 1. For instance,  $\frac{3}{5} = \frac{1}{2} + \frac{1}{10}$ . Consider the following algorithm for writing a fraction  $\frac{m}{n}$  in this form  $(1 \le m < n)$ : write the fraction  $\frac{1}{\lceil n/m \rceil}$ , calculate the fraction  $\frac{m}{n} \frac{1}{\lceil n/m \rceil}$ , and if it is nonzero repeat the same step. Prove that this algorithm always finishes in a finite number of steps. Note from Prof. Hall:  $\lceil x \rceil$  is the "ceiling" of x, i.e., the least integer greater than or equal to x. The textbook has a hint to this problem in the back.

### Section 1.4

- 2. Find an example of:
  - (a) A one-to-one function  $f: \mathbb{N} \to \mathbb{N}$  which is not onto
  - (b) A function  $f: \mathbf{N} \to \mathbf{N}$  which is onto but not one-to-one.
- 6. Prove that the following two statements about a function  $f: X \to Y$  are equivalent (X and Y are some arbitrary sets):
- ISIE(i) f is one-to-one. INSIBLY, USE RESPONS
  - (ii) For any set Z and any two distinct functions  $g_1:Z\to X$  and  $g_2:Z\to X$  the composed functions  $f\circ g_1$  and  $f\circ g_2$  are also distinct.

(First, make sure you understand what it means that two functions are equal and what it means that they are distinct.)
